

Rooftop Visit Form

Rooftop Name

Observers:

Date: MM

DD

YY

Start Time:

 AM
 PM

Status:

- No nesting yet this year:** No birds were seen on this rooftop yet (in current year).
- Active:** Nesting birds (of any shorebird/seabird species) are present on, flying to/from, or hovering over the rooftop.
- No Longer Active:** Birds that nested here this season are no longer present on rooftop.

Final Outcome? (If No Longer Active)

- One or more flight-capable juveniles** (any species) were produced at the site.
- No flight-capable juveniles** (any species) were produced at the site.
- I don't know** if any flight-capable juveniles were produced at the site.

Major loss? Did 25% or more of the nests fail or chicks die since last visit?

- Yes** → If Yes, describe cause: (e.g., weather event. If no cause is certain, write "unknown")
- No**
- I don't know**

Vantage Point? (from where did you view rooftop?)

- Ground:** viewed rooftop from the ground below.
- Above/Across:** viewed rooftop from an adjacent building or structure.
- On rooftop:** accessed rooftop to view birds (*special cases only!*).

Counts: In the table below, write the number of nests, chicks/juveniles, and adults of each species (within sight of the colony) and indicate the count type (Direct, Estimate, Present, Absent, Did Not Check, Flush Count, or High Count). See count type definitions in *Breeding Bird Protocol*.

SPECIES	NESTS		CHICKS / JUVENILES				ADULTS
	Number	Count type	# Downy	# Feathered	# Flight-capable	Count type	

Optional information:

Disturbance (caused birds to flush):

- Crows
- Wading birds
- People
- Raptors
- Gulls
- Aircraft

Other (If no cause is certain, write "unknown"):

Chicks falling off of roof? (since last visit)

- Yes →
- No
- Unknown

If Yes, describe:

Chicks returned to roof?

Yes
No →

If No, where taken?

Comments:
